

Lab 20. Creating a Conditional Column in Power BI

Lab 1: How to create a conditional column to categorize sales performance in Power BI?

- **Task:** Create a conditional column that categorizes sales as "High," "Medium," or "Low" based on `Sales` from the `Sales` table. You can take 3 interval values to set the threshold for High, Medium, and Low.
-

Lab 2: How to create a conditional column to determine whether an order is "Completed" or "Pending" based on `Order Date` in Power BI?

- **Task:** Create a conditional column that outputs "Completed" if `Order` is before today, and "Pending" if the `Order Date` is today or in the future.
