

6. Creating a Merge Query in Power BI

Lab 1: How to merge two tables based on a common column in Power BI?

- **Task:** Merge the `Customers` and `Orders` tables based on the common `CustomerID` field to create a combined table that shows customer details alongside their orders.

Lab 2: How to merge two tables with different column structures in Power BI?

- **Task:** Merge the `Sales` table and `ProductDetails` table where the `Sales` table contains `ProductID` and `SalesAmount`, and the `ProductDetails` table contains `ProductID` and `ProductName`.
