

Working with Advanced Data Filters in MS Excel

Lab

You manage a sales dataset and need to extract specific rows based on multiple complex criteria using **Advanced Filters** in Excel.

Example Setup in Excel:

Dataset (Range: A1:E8):

	A	B	C	D	E
1	Order ID	Product	Region	Salesperson	Sales Amount
2	001	Laptop	North	John Doe	1200
3	002	Smartphone	South	Jane Smith	800
4	003	Tablet	East	Mike Johnson	600
5	004	Laptop	West	Sarah Brown	1500
6	005	Smartphone	North	John Doe	700
7	006	Monitor	South	Jane Smith	400
8	007	Tablet	North	Mike Johnson	500

Criteria (Range: G1:H3):

Region Sales Amount

North >1000

South >500

Tasks:

1. Use the **Advanced Filter** feature to extract rows that meet the following conditions:
 - o **Region** is "North" with **Sales Amount > 1000**.
 - o **OR Region** is "South" with **Sales Amount > 500**.
 2. Display the filtered rows starting in cell **G5**.
-
