

Working with Data Validation in MS Excel

Lab

You are managing a product inventory and want to ensure data consistency by using **Data Validation** in Excel. Set up rules to restrict inputs in specific columns.

Example Setup in Excel:

| | A | B | C | D | E |
|---|-------------------|---------------------|-----------------|--------------|--------------|
| | Product ID | Product Name | Category | Price | Stock |
| 1 | P001 | Laptop | Electronics | 1200 | 25 |
| 2 | P002 | Tablet | Electronics | 500 | 40 |
| 3 | P003 | Chair | Furniture | 150 | 60 |
| 4 | P004 | Smartphone | Electronics | 800 | 30 |
| 5 | P005 | Desk | Furniture | 200 | 20 |

Tasks:

- 1. Category Column:**
 - Restrict entries in the **Category** column (C2:C6) to specific values:
 - "Electronics," "Furniture," or "Accessories."
 - 2. Price Column:**
 - Ensure the **Price** column (D2:D6) only accepts numbers greater than 100.
 - 3. Stock Column:**
 - Limit the **Stock** column (E2:E6) to whole numbers between 10 and 100.
-
